

CURRENT TRANSFORMERS FOR THERMAL RELAYS

S11-S12-S13-S14-S17

MB

2P - 2M - 2G

- Primary current from 1 to 600 A
- Compact size

These transformers have been designed to be associated with differential thermal relays such as LR1, LR2, or LT6 from Schneider Electric for motor protection.

They have a set saturation curve, depending on the relay and whether 2 or 3 CTs are fitted and on the motor starting time. Due to their compact size, they are particularly suitable for withdrawable Motor Control Centers.

They are compatible with Schneider Electric relays:

- MIU 21 - 16
- MIU 21 - 64
- MIU 22 - 16
- MIU 22 - 64

Installation

- M5 secondary terminal tightening torque = 2.5Nm
- M8 primary terminal tightening torque = 9 Nm

For an efficient motor protection, it is recommended to use the 3 CTs assembly. When the rated current is above 600A, use 2 CTs: the first on a busbar with 5A secondary current which will supply power to a S11-5 or a S12-5. The thermal relay, associated to this range of CTs, can be located at any distance from the motor.
